TIDEWATER INDUSTRIAL CENTER

Tidewater's Vancouver, Washington terminal encompasses Tidewater and Tidewater Environmental Services' headquarters buildings, container handling facility, refined liquid product storage tanks, and marine equipment maintenance facilities. Containers are handled between truck and barge, utilizing container handlers and a Manitowoc 4000 crane mounted on our barge dock. Liquid products are transferred between barge and upland storage tanks for our own fuel storage, as well as third-party storage.

Marine equipment is maintained with Tidewater's full-time staff of mechanics, electricians, and welders, using multiple moorages and our own drydock.
